MP²

Industrial Optimizers

Slot Management

MP² offers a comprehensive tool for the simple and effective management of your slots at coordinated airports.

Using MP² gives you the whole picture of your slot usage and requirements. MP² will manage the distribution and receipt of all slot messages, improving accuracy and saving time.

Key Features

- Tracking historical slots
- Identification of slot requirements in future schedules
- Identification of unused and underused slots
- Alerts on flights without slot clearance
- 80/20 functionality
- Full management of messaging
  - Production, preparation, distribution and receipt of all slot-related messages between Coordinators/Schedules Facilitators
  - Full compliance with IATA SSIM Chapter 6 requirements
- Runs on SeTS - Sequential Timetable Server - a basis for easy multiple user and change management, communications and third party systems interfaces.

- Report generation on wide range of slot-related issues, including:
  - Slot utilization
  - Rescheduled flights
  - Changed slots
  - Slot status
  - Sent messages and more
- Real time alerts for pending and denied slot requests
- Real time alerts for discrepancies between your schedule and slots held

Integration

MP² Slot Management fully integrates with all other available MP² packages. It can also be integrated with third-party and airline in-house systems, with ready-built interfaces available to many other suppliers' tools.
